

JOINT EVENT

22<sup>nd</sup> Global Congress on **Biotechnology**5<sup>th</sup> International Conference on &**Enzymology and Protein Chemistry**

February 28-March 02, 2019 | Berlin, Germany

**The effect of increase of NOx and CO<sub>2</sub> and climate**

In order, to study the reason why global warming is happening. Studies were conducted on amounts of CO<sub>2</sub> emission, CO<sub>2</sub> concentration NOx emission, grain production, sh production, population and CO<sub>2</sub> xed from 1900 to 2016. Since the industrial revolution, burning of fossil and production of CO<sub>2</sub> and NOx increased greatly. Increased CO<sub>2</sub> and NOx promoted the CO<sub>2</sub>
