Sri Lanka's disaster management policy aims to protect lives and developments in disaster affected areas by effectively using resources for disaster risk reduction, emergency management and community awareness. However, funding for these action programs has become a serious challenge to the country's economy. This paper examines the extent to which Private Public Partnership (PPP) can facilitate and expedite disaster management works. In particular, it discusses the results of the questionnaire survey among policymakers, government administrators, NGOs and private businesses. This questionnaire was conducted in
