The 2015/16 El Niño business in Botswana: Water supply disruptions among small and medium enterprises in Gaborone

Sinah Kgosietsile and Nnyaladzi Batisani

Botswana Institute for Technology Research and Innovation, Botswana

Statement of the Problem: The 2015/2016 El Niño weather phenomenon has intensified the already existing drought associated with climate change in Botswana. Drought affects water resources, driving up water shortages for all use, including industrial use. Profound economic impacts are felt across sectors, particularly Small and Medium Enterprises (SMEs) due to their limited
