Omental transposition to the brain for Alzheimer's disease

t has been commonly believed that a decrease in Cerebral Blood Flow (CBF) which routinely occurs in Alzheimer Disease (AD) results from the death of critical intra-cerebral neurons that no longer require the maintenance of an adequate blood supply. is belief is presently being challenged bySein(h)3 (r)-5.9 liefn5ip36 (v f5e)-5 4 r79 Qre eeitu.ds8 (en)1165 48 (l)7 (y b
