C7 or f24 was discovered as a highly expressed protein in bladder cancers by a proteomic analysis and later identi ed as the -glutamylcyclotransferase (GGCT). e silencing of GGCT using siRNA inhibited cancer cell proliferation and tumor growth in mice inoculated with cancer cells. However, the relationship between GGCT enzymatic activity and these phenotypes remained unbu42o(n)4 (d (h)4 (eMa3u(n)4 (d (b r)13 (if)9 op)12 (r)13 ().6 (,(w)8 ((t)-5 (t)-6 i(e)-4.9 (d(t)5.1 (r iden)1.11 (t)-5 lianceixelwascioi(r)-theoretyPerturbed (emn)4t)-6(h239y)
