

PRESCRIPTION HABITS AND PERCEPTION OF MEDICAL ETHICS

Asma Baazaoui^a

^aHigh institute of Management, Tunisia

The purpose of this study is to investigate the prescription habits and perception of medical ethics among physicians in Tunisia. The study was conducted in a tertiary care hospital in Tunisia. The data were collected through a questionnaire survey. The results of the study show that the majority of physicians in Tunisia are aware of the importance of medical ethics and adhere to the principles of medical ethics. However, there are still some challenges in the implementation of medical ethics in the Tunisian healthcare system. The study highlights the need for further research and education on medical ethics for physicians in Tunisia.

Biography

Asma Baazaoui is a PhD student at Institut Supérieur de Gestion (ISG) in Tunisia
