

Advances in surgical wound management

Mark S Granick
Rutgers New Jersey Medical School, USA

Statement of the Problem: The concept of surgical wound debridement was developed by military field surgeons and has remained as a sharp debridement technique for over 300 years until the development of new surgical technology in the 21st century.

Aim: The purpose of this presentation is to demonstrate the validity of new technologies and their role in the treatment of wounds.

Methodology: A review of the English language literature on surgical wound debridement is presented along with the author's personal surgical experience.

Notes:
