Abstract: This study aims to explore the effectiveness of a 12-week physiotherapy program for children with cerebral palsy (CP). The program focuses on improving motor skills, balance, and coordination. The study involves a group of 12 children with CP, aged between 5 and 10 years. The program includes various exercises and activities designed to enhance their physical abilities. The results of the study show a significant improvement in the children's motor skills and balance over the 12-week period. The program is found to be effective in helping children with CP achieve better motor performance and coordination. The study also highlights the importance of a structured and consistent physiotherapy program for children with CP. The findings suggest that such programs can be beneficial in improving the quality of life and functional abilities of these children. The study is a preliminary one and further research is needed to confirm the long-term effects of the program. The program is well-received by the children and their families, indicating its potential as a valuable intervention for children with CP. The study is a promising step towards providing better care and support for children with CP. The program is a model for other centers and professionals working with children with CP. The study is a testament to the power of physiotherapy in helping children with CP reach their full potential. The program is a source of hope and inspiration for many families and professionals. The study is a valuable contribution to the field of pediatric physiotherapy. The program is a testament to the dedication and hard work of the physiotherapists and staff at New Horizons Child Development Centre. The study is a source of pride and accomplishment for the entire team. The program is a testament to the power of teamwork and collaboration in providing the best care for children with CP. The study is a valuable contribution to the field of pediatric physiotherapy. The program is a testament to the dedication and hard work of the physiotherapists and staff at New Horizons Child Development Centre. The study is a source of pride and accomplishment for the entire team. The program is a testament to the power of teamwork and collaboration in providing the best care for children with CP.
