Survey of satisfaction of cancer patients and their family under home-based cancer patients management in Jeju

Hyeon Ju Kim and Jung Sik Huh
Jeju National University Hospital, Korea

Background: The purpose of this study was to investigate the satisfaction of cancer patients and their family under home-based cancer patients management in Jeju. A total of 200 patients and their family members were surveyed.

Method: A total of 201 patients and their family members were surveyed in 2017 and 2018. The survey was conducted using a self-administered questionnaire. The questionnaire included questions about the patient's satisfaction with the management of their disease, the family's satisfaction with the management of the patient, and the patient's quality of life.

Result: The satisfaction of cancer patients and their family under home-based cancer patients management in Jeju was 100%. The satisfaction of cancer patients was 42.5% (18/42) and the satisfaction of their family was 57.1% (24/42).

Conclusion: The satisfaction of cancer patients and their family under home-based cancer patients management in Jeju was 100%. The satisfaction of cancer patients was 42.5% (18/42) and the satisfaction of their family was 57.1% (24/42).
