## Prevalence of obesity in Iranian adults, since 2000

Enayatollah Bakhshi University of Social Welfare and Rehabilitation Sciences, Iran

Aim: Rates of obesity are rising alarmingly in most regions of the world, and this trend is not restricted to developed countries. e objective of this paper is to present the data for the prevalence of adult obesity in Iran, since 2000.

Methods: e prevalence of obesity among Iranian adults aged 20 years or older were determined using data from the national surveys. Height and weight were actually measured rather than self-reported.

Results: e prevalence of adult obesity nearly doubled from 12% in 2000 to 20% in 2007, and it remained high. Among adults (ages 20+), female obesity rates are higher than male obesity rates. Our results provide the national data on obesity prevalence by sex, a and place of residence, since 2000.

Conclusions: A concerted e ort must be made by the government to focus on the prevention and treatment of obesity in Iran.
