

Global Summit on

# Agriculture, Food Science and Technology

October 26-27, 2018 | Boston, USA

---

Decreases in greenhouse gas emissions by 50% by 2030 and by 100% by 2050. As a result, the agricultural sector is expected to contribute to a 10-40% reduction in global greenhouse gas emissions. This is achieved through a combination of improved agricultural practices, such as precision agriculture, and the adoption of sustainable technologies. The agricultural sector is also expected to play a key role in the development of a circular economy, which will help to reduce waste and improve resource efficiency. The agricultural sector is also expected to play a key role in the development of a circular economy, which will help to reduce waste and improve resource efficiency.
