

International Conference on

Restorative Dentistry and Prosthodontics

October 20-21, 2016 Houston, USA

U i e i f M a a d, USA

Optimum aesthetics

Optimum aesthetics is a key factor in the success of restorative dentistry. It involves the creation of a natural-looking smile that meets the patient's expectations. This is achieved through a combination of technical skill and artistic vision. The dentist must take into account the patient's facial features, skin tone, and overall appearance. The use of high-quality materials and advanced techniques is essential for achieving the desired results. Communication with the patient is also crucial to ensure that the final outcome meets their needs and desires.

Communication:

Effective communication is the foundation of a successful dental practice. It involves listening to the patient's concerns, explaining the treatment options, and setting realistic expectations. The dentist should use clear and concise language, avoiding technical jargon. Active listening is also important to understand the patient's needs and preferences. Regular communication throughout the treatment process helps to build trust and ensures that the patient is satisfied with the results.

Biography

David Mazza has completed his Post-doctoral training in the field of Operative and Aesthetic Dentistry at Boston University, School of Dental Medicine from 1994 to 1996. Since the year 2000, he has been serving as Clinical Assistant Professor at University of Maryland School of Dentistry as a part-time faculty member.
