

6th World Conference on Climate Change

September 02-03, 2019 | Berlin, Germany

Climate change, its effects and possible solutions on our environment

Yakubu Muntaka Musah
Y M Ventures, Ghana

Climate change may refer to a change in the average weather condition or in the time variation of weather within the context of longer term average condition. Climate change is caused by factors such as biotic processes, variation in solar radiation, and other human activities that have been identified as primary causes of ongoing climate change, often referred to as global warming. There is no doubt that the impact of climate change are beginning to manifest on the entire globe and more particularly on the developing nations. Climate change and climate variability may pose serious challenge to national development. Government and other state agencies have adopted measures
