Study of the gut enterotypes in some Egyptian patients with Type 1 diabetes mellitus

Amany Ahmed Elbanna, Shwikar M Abdel Salam Ahmed, Kamel Hemida Rohoma, Ahmed Ismail Ellakany Moamen Ayman Fawzy

Introduction : Gut microbiota cluster into three enterotypes named the *Bacteroides*, *Prevotella* and *Ruminococcus*. While each person's microbial "ingerprint" is unique, there are specific patterns seen in those that are healthy and those that have specific illnesses.

Objective : The objective of the present study was to identify the enterotypes that are possibly associated with Type I Diabetes Mellitus (T1DM) in Egyptian patients as well as their relationship with the clinical and biochemical parameters.
