Abstract

Statement of the Problem: Nowadays the world is seismic unresistant, earthquakes lead to the appearance of a large number of victims. First aid is extremely important due to destruction of medical infrastructure. Medical students can be involved in providing first aid and strengthening medical care. That's why a survey on the basis of first aid in earthquakes is important. The survey was completed by 55 students: 52,73% - first, 10,91% - second, 25,45% - third year, 7,27% - fifth and 3,64% of the sixth years. Among all, 50 students do not work. Only 36 are ready to participate in the elimination of the consequences of the emergency, among these 25 are the first year students. Perhaps, this is because they just started to study and do not understand completely what an emergency situation is. 90% know about earthquake safety rules. Approximately 73% know the causes of irretrievable and health losses, incorrect answers were in the first year students. But 20 of them know that approximately 15-
