

A Brief Note on Podiatric Medicine

Ji Chang Woog*

Clinic of Trauma and Orthopaedic surgery, Leipzig, Germany

Editorial Note

Podiatry is a branch of drug devoted to the study, opinion, and medical and surgical treatment of diseases of the bottom, ankle, and lower extremity. The term podiatry came into use in the early 20th century in the United States and is now used worldwide, including in countries similar as the United Kingdom, Australia, and Canada.

A Croaker of Podiatric Medicine (DPM), or a podiatrist, is a healthcare professional who judgments and treats conditions affecting the bottom, ankle, and structures of the leg. The US podiatric medical academy class (analogous to their US MD and DO counterparts) includes lower extremity deconstruction, general
