

A Comprehensive and Multidisciplinary Methodology to Improve Biosimilar Uptake in the United States

Sophia Z Humphreys

University of Washington, School of Pharmacy, USA

Abstract:

American healthcare cost reached 3.65 trillion in 2018. Of that, 344.5 billion was

spent on prescription medications. High cost specialty drugs and large molecule biologic medications were substantial drivers of this increase. In the past five years, progressively more biologic medications have been marketed in the US (IQVIA, 2018). Unlike small molecule chemical medications, there are no generic alternatives
