

A Short Note on Civil Engineering Specializes in Design and Construction

Department of Land Surveying and Geo-informatics, The Hong Kong Polytechnic University, Hong Kong

Editorial

Civil engineering is a broad discipline that encompasses a wide range of activities, from the design and construction of infrastructure to the management of construction projects. In recent years, the field has seen significant advances in design and construction technologies, which have led to more efficient and sustainable projects. This special issue focuses on the latest developments in these areas, providing a platform for researchers and practitioners to share their knowledge and experiences. The papers in this issue cover a wide range of topics, including the use of Building Information Modeling (BIM) in construction, the application of artificial intelligence in design, and the development of sustainable construction practices. The special issue is intended to provide a comprehensive overview of the current state of the field and to highlight the key challenges and opportunities facing the industry. The papers are presented in a clear and concise manner, making them accessible to a wide range of readers. The special issue is a valuable resource for anyone interested in the design and construction of civil engineering projects.
