Assessment of Public Awareness

The COVID-19 pandemic, otherwise called the Covid pandemic, is a continuous pandemic of Covid illness 2019 (COVID-19) brought about by serious intense respiratory disorder Covid 2 (SARS-CoV-2). It was first recognized in December 2019 in Wuhan, China. The World Health Organization proclaimed the episode a Public Health Emergency of International Concern in January 2020 and a pandemic in March 2020. Starting at 18 December 2020, more than 74.9 million

ascribed to COVID-19[1,2].

Manifestations of COVID-19 are exceptionally factor, going from none to serious sickness. The infection spreads essentially through the air when individuals are close to each other. It leaves a tainted individual as they inhale, hack, snuffle, or talk and enters someone else by means
