

# Biomass Brilliance Fueling the Future Sustainably

*Department of Clinical Diabetes and Research, University of Bhubaneswar, India*

As the world grapples with the escalating challenges of climate change and diminishing fossil fuel reserves,enges fossils fossils TJ/T2

Antimicrobial resistance (AMR) is a global health threat that has become increasingly prevalent in recent years. The World Health Organization (WHO) estimates that AMR is responsible for approximately 700,000 deaths annually, with the number of deaths expected to rise to 10 million by 2050 if current trends continue. The emergence of AMR is driven by a variety of factors, including the overuse and misuse of antibiotics, the development of new antibiotic-resistant strains, and the lack of investment in the development of new antibiotics.
