In the year 2019, the world's climate system has warmed by 1.1°C since 1880. This is a clear and unequivocal sign of human influence on the climate system. The world is on track to reach 1.5°C by 2030, and 2.0°C by 2050. This is a dangerous level of warming, with the potential for catastrophic impacts on human health, food security, and the environment. The world must take urgent action to limit global warming to 1.5°C, and to reach net-zero emissions by 2050. This requires a rapid and deep decarbonization of the global economy, and a just transition for workers and communities affected by the transition. The world must also take action to adapt to the impacts of climate change, and to build resilience to the risks of climate change. The world must also take action to protect and restore ecosystems, and to promote sustainable development. The world must also take action to address the loss and damage caused by climate change. The world must also take action to promote climate justice, and to ensure that the most vulnerable are protected from the impacts of climate change. The world must also take action to promote climate leadership, and to ensure that all countries are held accountable for their climate commitments. The world must also take action to promote climate cooperation, and to ensure that all countries are working together to address the global climate challenge. The world must also take action to promote climate innovation, and to ensure that all countries are contributing to the development of climate solutions. The world must also take action to promote climate education, and to ensure that all people are aware of the climate challenge and the need for action. The world must also take action to promote climate awareness, and to ensure that all people are motivated to take action to address the climate challenge. The world must also take action to promote climate action, and to ensure that all people are taking action to address the climate challenge. The world must also take action to promote climate justice, and to ensure that the most vulnerable are protected from the impacts of climate change. The world must also take action to promote climate leadership, and to ensure that all countries are held accountable for their climate commitments. The world must also take action to promote climate cooperation, and to ensure that all countries are working together to address the global climate challenge. The world must also take action to promote climate innovation, and to ensure that all countries are contributing to the development of climate solutions. The world must also take action to promote climate education, and to ensure that all people are aware of the climate challenge and the need for action. The world must also take action to promote climate awareness, and to ensure that all people are motivated to take action to address the climate challenge. The world must also take action to promote climate action, and to ensure that all people are taking action to address the climate challenge.
