

## **I n t r o d u c t i o n**

Palliative medicine focuses on providing relief from the symptoms and stress of serious illnesses, aiming to improve the quality of life for both patients and their families [1]. Traditionally, palliative care has relied on a combination of pharmacological and non-pharmacological

help providers stay updated on the latest research and clinical practices related to H3 receptor modulation in palliative care. While the potential benefits of H3 receptor modulation in palliative care are promising, several challenges remain:

**Lead candidate:** More clinical trials are needed to establish the efficacy and safety of H3 receptor modulators in palliative care settings [9].

**Secondary challenge:** Understanding and managing potential
