

Construction Engineers Improving the Cons

Construction is a people business. Many engineers are not people persons. However, some are. The best boss I had in Construction was not an engineer. He was a military man. Nevertheless, putting engineering in the Project Manager role and the Clerk of the Works should improve the work in the construction business. On another note, job training is poor at universities. They need to improve at universities. I appreciate that university is not about job training, but rather about education. Fine if you can afford that. If the student is borrowing the tuition, it's a bad investment for Civil Engineers who work in the

construction industry. I regret taking Civil Engineer Construction Management. Engineers are not respected by nanoengineering bosses and site workers alike. Engineers should be supervised by engineers so that the code of ethics is respected. You'll find yourself out of a job if you adhere to the ethics when your boss doesn't.

Lots of room for improvement. It's up to the Employers and the Engineering Associations to enact these recommendations.
