

## Dental Health 2021: Coronal rehabilitation of endodontically-treated teeth with deep marginal elevation and ceramic endocrown case report - Areej A. Derham, King Abdulaziz University, Saudi Arabia

Areej A. Derham

**Aim:**This article presents a high level restorative methodology dependent on glue dentistry.

**Background:**The reclamation of endodontically-treated teeth (ETT) has been broadly and questionably talked about in the dental writing, the majority of which prescribes cuspal inclusion of ETT to secure against potential tooth crack. The principle objective of moderate dentistry in overseeing ETT is
