

Dentists 2020: Role of LSTR in root canal therapy particularly against *Enterococcus faecalis* and *Enterococcus faecium*; Clinical evaluation of in-office tooth bleaching effects on three contemporary composites resin- Aklaqur Ameer, Babylon University, Iraq

Aklaqur Ameer

To assess and look at the clinical exhibition of three contemporary nano composites pitch reclamation as front rebuilding in class IV cavities in maxillary foremost teeth more than one year in the wake of blanching follow up period.

An aggregate of 12 subjects (30 rebuilding efforts), 18-multi year old with class IV carious upper front teeth were incorporated, partitioned into three gatherings. Each gathering (n=10 reclamations) was haphazardly reestablished with a similar rebuilding material sort; Beautifil II nano-cross breed composite sap (Shofu Dental Corporation, USA), IPS Empress Direct a nano-half and half composite pitch (Ivoclar Vivodent, USA), and the nano-fired smaller scale mixture composite tar; Ceram-x
