

Enhancement of Environmental Pollution Due to Waste Water Disposal

Leslie Wikilson*

London School of Hygiene and Tropical Medicine, London, England, United Kingdom

The environmental pollution due to waste water disposal is a global problem. The pollution is caused by the discharge of untreated wastewater into the environment. This pollution is a major source of waterborne diseases and is a significant public health problem. The pollution is caused by the discharge of untreated wastewater into the environment. This pollution is a major source of waterborne diseases and is a significant public health problem.

Human activities are the main source of environmental pollution. The pollution is caused by the discharge of untreated wastewater into the environment. This pollution is a major source of waterborne diseases and is a significant public health problem. The pollution is caused by the discharge of untreated wastewater into the environment. This pollution is a major source of waterborne diseases and is a significant public health problem.
