## Abstract

**Background:** Community engagement enables development of strong health care system and comprehensive use of health services resources. However, in primary health care there are inconsistencies in levels of engagement of the community that hinder much gain from the social capital and that cause unrealistic expectations from the health system. There is little research finding on the level and pattern of community engagement in primary health care unit level in East Wollega zone.

**Methods:** Community based qualitative study was employed from April to May 2016 with sample size of 30 in-
