We believe that the health of the feet must continually be encouraged, for it has implemented a program of Podiatric School Health, which has continuously maintained over the last 20 years. This program has been carried out in the city of Seville, with the aim of preventing and promote child health. To achieve these goals two stages are marked. The first is to early detection of podiatric pathologies, describe the level of podiatric health, meet the most frequent alterations in the feet of schoolchildren 3-15 years and identify possible risk factors through a podiatric exploration which is done to each child.
