Abstract

One of the most common pathologies in the world nowadays can be called type 2 Diabetes Mellitus (DM), the incidence of which according to the WHO is 347 million people, 91% of which are patients with diabetes of type II. Quite a big number of persons suffering from diabetes complain about the state of the digestive system (75%), which indicates the need for a detailed study of the problem.

level. The longer the patient diagnosed with diabetes more damage it make the patient digestive system.
