

# Immuno-oncology for Breast Cancer Treatment (NCT01827501) Celgene Corporation,

measure the glands that manufacture milk and ducts square measure the paths that bring the milk from the glands to the teat. Cancer may occur in the adipose tissue or the fibrous animal tissue inside your breast.

Each type of breast carcinoma can cause a specific set of symptoms. Some of these symptoms square measure similar, however some is completely different. Symptoms for the most common breast cancers include:

**Atypical hyperplasia** - thickening that feels completely different than encompassing tissue and has developed recently. Breast pain/redness/irritation that your entire breast swelling altogether or a part of your breast a teat discharge aside from breast milk. A discharge from your teat. Peeling, scaling, or cracking of skin on your teat or breast. A such, unexplained irritation in the form or size of your breast. **Ductal malignant neoplastic disease in place** - may be a noninvasive condition. Malignant cancer cells area unit conjoined to the ducts in your breast and haven't invaded the encircling breast tissue.

**Ductal malignant neoplastic disease in place** - is cancer that grows in the milk-producing glands of your breast. In place cancer cells haven't invaded the encircling tissue.

**Invasive ductal malignant neoplastic disease (IDC)** is the most common form of carcinoma. Invasive ductal carcinoma begins in your breast's milk ducts and invades close tissue in the breast. Once the carcinoma has unfolded in the tissue outside your milk ducts, it will begin to unfold in different close organs and tissue.
