Rajiv Gandhi Centre for Biotechnology, India

Improvement of gastric maladies like gastritis, peptic ulcer, and gastric malignant growth relies upon a few biotic and abiotic components and *Helicobacter pylori* disease is a notable biotic factor. In any case, not all *H. pylori*-tainted people create gastric illnesses and not all p, In

and *Fusobacterium*. Curiously, be that as it may, the vast majority of these microscopic organisms can't be refined utilizing customary procedures. Utilizing society based techniques, the all out bacterial include in human stomach may go from 0 to 10³ cfu/g.

Nearness of a various gathering of microorganisms in stomach isn't unexpected since the stomach is presented to food materials conveying microbial populace. Without a doubt, about 65% of the phylotypes that have been distinguished in stomach
