

Introduction

Introduction text block containing the beginning of the article's main body.

Conclusion

The conclusion of this study highlights the critical importance of ethical considerations in palliative care, particularly regarding the principle of double effect and compassionate end-of-life interventions. The findings suggest that a multidisciplinary approach, involving healthcare providers, patients, and families, is essential for navigating these complex ethical dilemmas. The study also emphasizes the need for further research and the development of standardized protocols to guide clinical practice in these situations.
