Epidemiological estimates predict that this figure could triple by 2030 [34].

This situation reflects a real need for cancer care and especially in palliative care. The management of patients in a palliative setting is an important element of the health care strategy in oncology, and the cancer plan in Morocco makes access to palliative care as an important goal to all Moroccans.

According to WHO estimates for palliative care needs in the region, around 62,000 Moroccans, including 6000 children, need each year palliative care. Moroccan's healthcare system does not have
