

Postincisional Pain in Spinal Cord Stimulation: Incidence and Treatment

Alessandro Dario , Gianluca Agresta, Desiree Lattanzi, Lidia Bifone, Stefania Padovan and Davide Locatelli

The postincisional pain in SCS is a quite common complication present in many clinical series, however the reported data mainly on long-term follow-up of this pain are not well described as well as the treatment is not standardized. We suggest the development of studies that clarify the pathogenesis as well as the guidelines for the treatment of this condition.
