

Reactive Hazard and Bioprocess Safety

Ramon Flick*

Letter

Natural specialists, or living creatures, ordinarily present risks to other living life forms including people. For bioprocess engineers, microorganisms are a successive concern. Macroorganisms, like creatures, bugs, and plants, are all the more normally the worry of rural organic architects and biomedical specialists. Here we limit our conversations to microorganisms [1]. The general dangers of infective microorganisms are ordered by risk bunch:

1) Risk 1: Agents not related with illness in solid grown-up people.

2)
