

Sedation for Pediatric Patient with End-Stage Hepatic Disease Outside Operating Room

Cankaya B^E

Monitoring during the procedures

Noninvasive/invasive blood pressure, pulse oxymeter; capnography, bispectral index, cerebral oxymeter, core temperature and urinary output are used for patient safety and anaesthesia depth.

Drugs

These drugs for sedation outside operating room are a mixture of old and new drugs. According to the protocol used in the institution their doses alone and in combination with other anesthetics differ. But
