

Suicide Tendency among under Graduate Students in Bangladesh during COVID Period

ABSTRACT: *This study aims to underline the importance of the study curriculum system as a significant*

CONCLUSION

Depression is causing undergraduates to commit suicide. Depression is triggered by various topics such as uncertainty of jobs, uninterested subject\ work-feld, family problems. As they start their undergraduate life it was just some stress in the beginning but as time goes the stress becomes depression, which creates a heavy impact on their mental health. As most undergraduates live away from their homes they even hardly find anyone to console. That's why grownups (parents and institutions) should be more careful about their child's mental health.
