Keywords: Gynecologic cancers; Reproductive health; Infertility; Obstetrics; Cervical cancer; Risk factors; Health care; Quality of life.

Introduction: Gynecologic cancers, including cervical, endometrial, and ovarian cancer, are leading causes of cancer-related morbidity and mortality among women. These cancers often affect reproductive health, leading to infertility, hormonal imbalances, and psychological distress. Understanding the impact of these cancers on reproductive health is crucial for developing effective management strategies and improving patient outcomes. This review explores the various ways in which gynecologic cancers can impact reproductive health, from direct effects on the reproductive system to indirect effects through treatment and psychological factors.

Conclusion: The impact of gynecologic cancers on reproductive health is multifaceted and requires a comprehensive approach to management. Further research is needed to better understand the underlying mechanisms and to develop targeted interventions to minimize these impacts.

Keywords: Gynecologic cancers; Reproductive health; Infertility; Obstetrics; Cervical cancer; Risk factors; Health care; Quality of life.

Introduction: The impact of gynecologic cancers on reproductive health is a complex issue. These cancers can directly affect the reproductive system, leading to infertility and other reproductive health problems. Additionally, the treatments for these cancers, such as surgery, chemotherapy, and radiation, can have significant side effects on reproductive health. This review discusses the various ways in which gynecologic cancers and their treatments can impact reproductive health.

Conclusion: The impact of gynecologic cancers on reproductive health is a significant concern for many women. It is essential for healthcare providers to be aware of these potential impacts and to provide appropriate counseling and support to their patients. Further research is needed to better understand the underlying mechanisms and to develop strategies to minimize these impacts.
