

Introduction: The world health organization (WHO) carried out a careful security agenda to limit damage and hazard to patients and to improve correspondence among the careful group. The point of this review is to Introduce World Health Organization Surgical Checklist for minor activity technique, to decide if we agree with the WHO careful wellbeing agenda when completing minor oral medical procedure under neighborhood sedative and to guarantee fruitful execution of WHO careful security agenda. A review study did in Maxillofacial Department, zeroing in on Minor oral medical procedure list. The examination (first cycle) included 150 patients who went through minor oral medical procedure methodology in the division over the multi month time span. Each record was checked to affirm consistence concerning filling the three phase agenda appropriately and all reports marked. First cycle was finished and with huge input from staff, the agenda was changed and improved. Two cycles have been finished and the WHO agenda was executed in our minor oral medical procedure list. The World Health Organization's (WHO) Surgical Safety Checklist (SSC) has been accounted for to lessen both grimness and mortality. The SSC was created to improve cooperation, correspondence and consistency of care in working rooms. Enhanced collaboration and correspondence is one of the systems used to clarify SSC impacts on tolerant outcome. Facilitators of SSC utilize that reinforce execution are accounted
