

## Hypoglycemia after Bariatric Surgery

**Suresh Konda\***

*SRM university, Chennai, India*

### **Rapid Communication**

Severe hypoglycemia characterized by neuroglycopenic symptoms may be a recently described and comparatively uncommon complication of gastric bypass surgery. It occurs several months to years after surgery and should be distinct from the more commonly encountered dumping 2 TD[(m]9D5mgInd 3(c) TD[9(c)(h)p codu4
