

Roles and Responsibilities of Nurse Practice

Andy Russle*

Department of Nursing Science, Jimma Institute of Nursing, Nigeria

Abstract

The aging of population has also resulted in increased interest in long-term care in home care as well as in institutional care residential and community care. It is important that the health services provided to the older population be responsive not only to their physical but also to the mental and emotional needs.

Keywords: Aging of population; Long-term care; Home care; Institutional care; Residential care; Community care

Introduction

The aging of population is a global phenomenon. In 2000, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050.

Older adults are more likely to have chronic conditions and functional limitations. They are also more likely to live in long-term care facilities. The aging of population is a global phenomenon. In 2000, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050. In 2010, the world population aged 60 years and over was 11% and 22% in 2050.
