Editorial

There are various sorts of cancer treatment. The sorts of treatment that you just have will depend on the sort of cancer you've got and how progressed it is. A few individuals with cancer will have only one treatment. But most individuals have a combination of medications, such as surgery with chemotherapy and/ or radiation treatment. You'll also have immunotherapy, targeted treatment, or hormone treatment.

Chemoprevention

Cancer begins when solid cells alter and develop wildly. It forms a mass called a tumour. The process of a solid cell getting a cancerous one generally takes time. And various inheritable, healthy, and life variables, comparative as smoking, may impact this process [1]. Cancer chemoprevention employs substances [17]. Cak-ire *ilo 7
