

Journal

biopsy was solely used as both components were not present. The next case was initially diagnosed as spindle cell sarcoma, but the resection material revealed osteosarcoma with fibroblastic differentiation. In the last case, three biopsies were required to establish the final diagnosis of dedifferentiated chondrosarcoma with undifferentiated spindle cell sarcoma component.

Another commonly used example of obsolete nomenclature is present in

13. Breen TF, Healy WL (1987) Malignant fibrous histiocytoma arising in medullary long bone infarcts: A case report. *Orthopedics* 10: 1169-1173.
