

Figure 10: A complex network diagram showing interactions between various nodes, likely representing metabolic pathways or signaling molecules in the tumor microenvironment. The nodes are interconnected by numerous lines, forming a dense web of relationships.

**L**

Figure 11: A network diagram similar to Figure 10, showing a different set of interactions between nodes. The structure is highly interconnected, with many nodes having multiple connections.

Figure 12: A network diagram showing interactions between nodes, with a slightly different topology compared to the previous figures. The nodes are arranged in a more structured manner with clear clusters.

**F**

Figure 13: A network diagram showing interactions between nodes, with a distinct pattern of connections. The nodes are more spread out, and the connections are less dense than in the previous figures.

**C**

Figure 14: A network diagram showing interactions between nodes, with a unique topology. The nodes are arranged in a way that suggests a different functional organization compared to the other figures.

Figure 15: A network diagram showing interactions between nodes, with a topology similar to Figure 10. The nodes are highly interconnected, forming a dense network.
