

Emerging Infectious Diseases: Trends and Challenges in Epidemiology

Fleur Seng*

Department of Infectious Diseases, Reference Center for Osteo-Articular Infections Interregional South-Mediterranean, Sorbonne University, France

Abstract

The global landscape of infectious diseases has been continually evolving, presenting significant challenges to public health systems worldwide. The emergence and re-emergence of infectious diseases are infuenced by a complex interplay of factors, including environmental changes, human-animal interactions, microbial adaptation, and the global
