microbiology. The switch to liquid-based microbiology is one of the most influential technological innovations in the area of microbiology. Additionally, the rising number of patients who receive indwelling devices, which might lead to infection, has triggered the need for laboratory services. The aging workforce in laboratory testing, greater demand for high quality laboratory services, and increasing necessity of timely results will bring about the expansion of the global market for automated microbiology over the forthcoming Period.

New systems are increasingly being developed by leading companies to amplify their profit in the automated microbiology market. For instance, in April 2019, bioMérieux, a leading company offering in vitro diagnostics solutions, announced that it received the approval of the U.S. Food and Drug Administration (FDA) for its innovative, fully automated blood culture system. With BacT/ALERT® VIRTUO™, personnel of any skill

level can handle the loading of bottles. The Virtuo system can handle the loading of up to 30 bottles in a single run.
